

PAYSYS LABS

Talk to Data

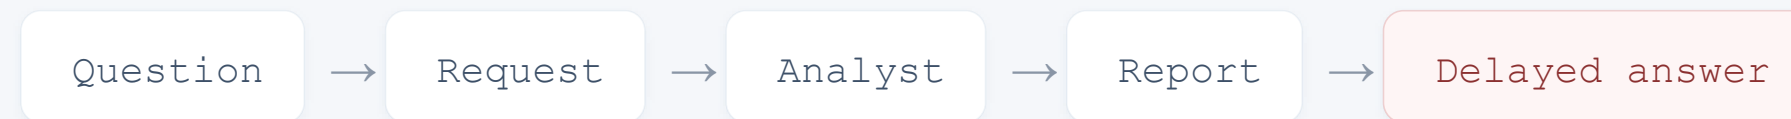

Ask the question. Get the answer. Live from your data.

An AI-powered business intelligence use case by **Paysys Labs**.

THE PROBLEM

Business questions still take too long to answer.

⌚ Teams depend on reports, dashboards, analysts and SQL requests to get answers.

⌚ Simple answers often take hours or days. Follow-up questions are delayed or never asked.

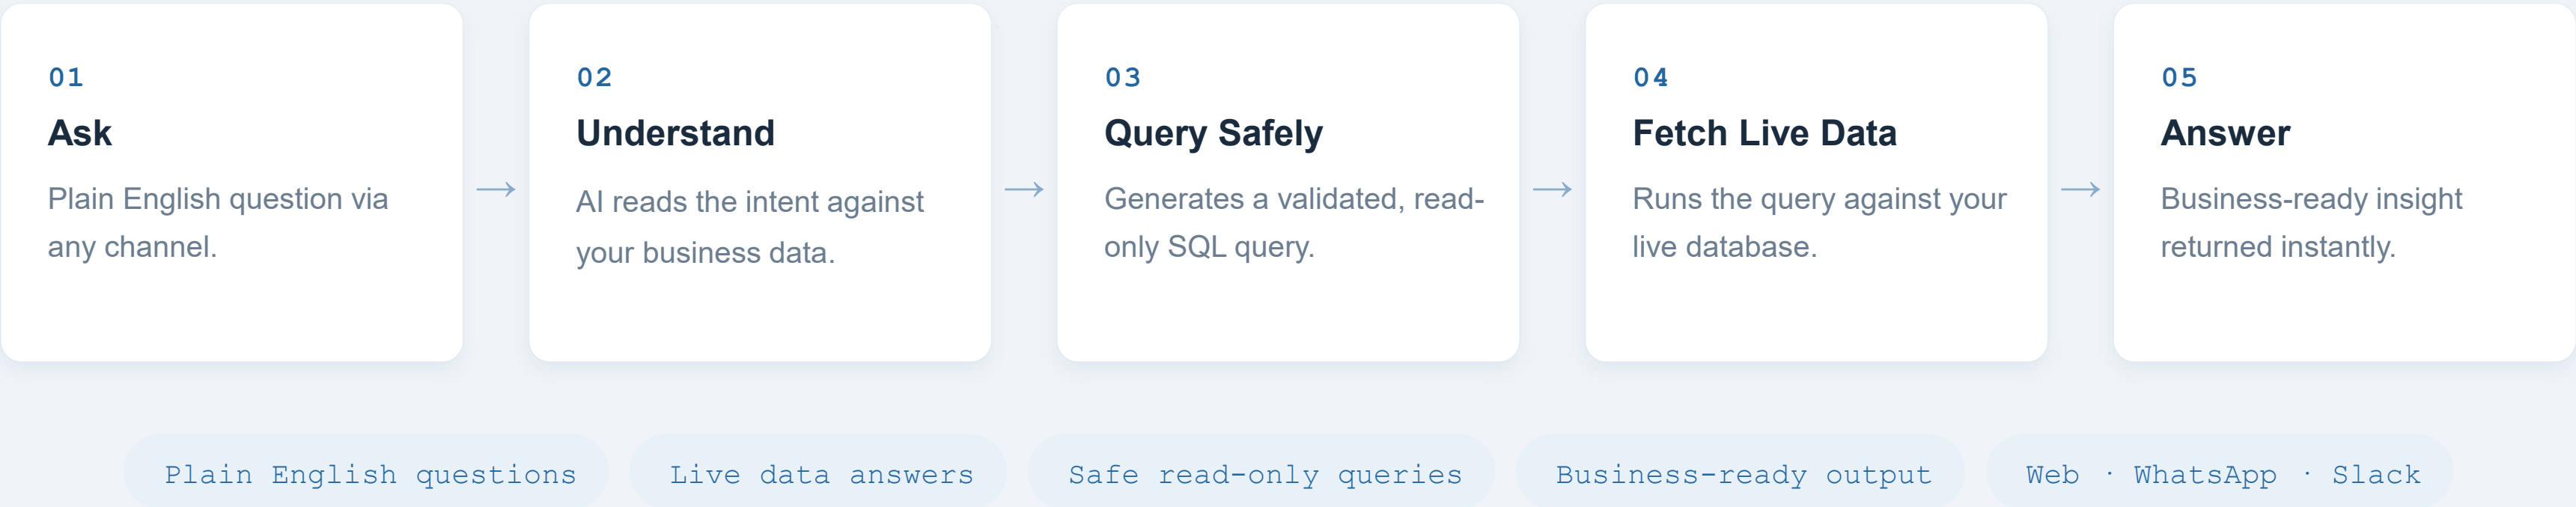

📉 Decision-makers do not always get answers when they need them.

Business leaders should not have to wait for a report to know how the business is performing.

HOW PAYSYS LABS SOLVES IT

Paysys Labs turns business questions into live answers.

Talk to Data lets users ask questions in plain English and receive live answers from enterprise data sources.

One question. One live answer.

USER ASKS

Compare Manchester and London merchant sales this month.

The user asks a normal business question. The AI understands the intent, queries the data safely, and returns a clear business insight.

Q: Compare Manchester and London merchant sales this month

London is outperforming Manchester by **£109M**.

London	£196M	5,310 merchants
Manchester	£87M	2,840 merchants

• SQL executed successfully · 0.71s · 4 Jun 2026

One pattern. Multiple enterprise use cases.

This is one implemented use case, but the same Paysys Labs approach can support:

Sales Performance

Merchant Analytics

Transaction Monitoring

Risk Insights

Operational Reporting

Customer Analytics

Reconciliation Insights

Proactive Alerts

Start with one high-impact PoC.

One business question. One live data source. One practical use case.
